

My photo-story

Introduction

A walk through the small town we live in, is enough to prove the fact that the recent epidemia, that threatens human lives, puts in danger the earth itself, as one can recognize another kind of rubbish, sanitary masks!

In a way, we protect our own face but we ignore the needs of the face of the earth. We add another kind of litter polluting the environment in which we live and breathe.

It is time to awake our consciousness and preserve the face of the earth clean, for we walk on it and breathe from its breath.

(98 words)

Photo1. Earth alert! Is there a mask that fits the face of the earth?

Photo 2. Another wrinkle on the face of earth. The earth gets older and older, day by day...

Photo 3. Technology might "run" forward but we go backwards polluting the earth...

Photo 4. Do we wish to stress our own indifferent behaviour, in every possible way?...
