## PLANT A TREE – MAKE YOUR SHADE FOR THE FUTURE

Forest fires are one of the most catastrophic and life-threatening environmental disasters. Over the past years, they have spread faster than the speed of light and have become more severe than ever. Our planet has just experienced the warmest winter in its history. Rising temperatures and drier climate are the perfect conditions for more fires, creating a vicious circle where the overheating of our planet causes fires and the fires cause overheating. Trees can reverse climate change and save the planet. Let's stop burning them down. Let's plant more of them, instead. Together, we can!

More than half of the world's forests have been burnt down to ashes.

Our planet has experienced the warmest winter in its history.

Act now! The planet is our home but it does not belong to us.

Raise awareness! The time we have to reduce all the damage we have done is limited.

A tree is a magic machine that turns carbon dioxide into oxygen. Even one tree can make a big difference.
